PREFACE	xi
ACKNOWLEDGMENTS	xiii
LIST OF FIGURES	xv
LIST OF TABLES	xix
LIST OF SYMBOLS AND ABBREVIATIONS	xxi
<b>1 VECTOR SHAPE FUNCTIONS</b>	<b>1</b>
1.1. Introduction	1
1.2. Sample vector problem of technical electrodynamics	1
1.3. The brick finite element	3
1.4. Vector shape functions - nodal realization	5
1.5. Vector shape functions - edge approximation	11
1.6. Vector shape functions - facet approximation	14
1.7. Summary	15
<b>2 ANALYSIS OF 3D MAGNETOSTATIC FIELDS</b>	<b>17</b>
2.1. Introduction	17
2.2. General 3D magnetostatic boundary value problem	17
2.3. 3D analysis of magnetostatic field by means of scalar potentials	21
2.3.1. 3D analysis by means of two scalar potentials	23
2.3.2. Modeling of 3D air coils	26
2.3.3. Modeling of 3D coils with iron-cores	31
2.4. 3D magnetostatic analysis using magnetic vector potential	32
2.4.1. Edge elements in $\mathbf{A}$ formulation	33
2.4.2. Magnetic vector potential $\mathbf{A}$ - separation of components	34
2.4.3. Formulation $\mathbf{A}$ - $\mathbf{M}$ for nonlinear magnetostatic problems	37
2.5. 3D magnetostatic analysis - direct $\mathbf{H}$ formulation	41
2.5.1. Direct $\mathbf{H}$ formulation with separated components	41
2.5.2. Edge elements in direct $\mathbf{H}$ formulation	44
2.6. Summary	45
<b>3 INTERFACE BETWEEN TWO ELECTRICALLY CONDUCTING FLUIDS</b>	<b>47</b>
3.1. Introduction	47
3.2. Physical model and formulation of the problem	48
3.2.1. Description of the interface shape	50
3.2.2. Magnetic field outside cylindrical cell - analytical approach	56

3.2.3.	Verification of the analytical approach . . . . .	59
3.3.	Interface shape reconstruction - dominant mode identification . . . . .	68
3.3.1.	Signal profiles and limits of measurement system . . . . .	70
3.3.2.	Simple genetic algorithm . . . . .	77
3.3.3.	Direct search method . . . . .	87
3.3.4.	Cross-correlation approach . . . . .	93
3.4.	Summary . . . . .	99
4	SEMI-ANALYTICAL METHODS IN LORENTZ FORCE EDDY CURRENT TESTING (LET)	101
4.1.	Introduction . . . . .	101
4.1.1.	Moving coordinate systems - transformations . . . . .	101
4.2.	2D Lorentz eddy current testing models . . . . .	104
4.2.1.	Problem description . . . . .	104
4.2.2.	Lorentz forces in 2D LET system . . . . .	106
4.2.3.	Dipolar model of 2D permanent magnet . . . . .	108
4.2.4.	2D rectangular permanent magnet - exact field formulas . . . . .	115
4.2.5.	Résumé . . . . .	118
4.3.	Modeling of 3D permanent magnets . . . . .	118
4.3.1.	Introduction . . . . .	118
4.3.2.	Magnetic dipoles models (MDM) . . . . .	119
4.3.3.	$\alpha$ -MDM of rectangular permanent magnet . . . . .	119
4.3.4.	$(\alpha, \beta)$ -MDM of cylindrical permanent magnets . . . . .	121
4.3.5.	Cuboid/Cylinder - analytical formulas of magnetic flux density . . . . .	123
4.3.6.	Magnetic dipoles models - optimal parameters . . . . .	126
4.3.7.	Rectangular permanent magnet - results of simulations . . . . .	126
4.3.8.	Cylindrical permanent magnet - results of simulations . . . . .	130
4.3.9.	Résumé . . . . .	133
4.4.	Calculation of forces in 3D LET models . . . . .	134
4.4.1.	Problem description . . . . .	134
4.4.2.	Lorentz forces for plates without defects . . . . .	135
4.4.3.	3D defect response signals . . . . .	143
4.4.4.	Circle-shaped hole in a thin conducting sheet . . . . .	146
4.4.5.	Extended area approach . . . . .	149
4.4.6.	Defect response signals - anisotropic conductor . . . . .	152
4.4.7.	Simulations of 3D DRS with extended area approach . . . . .	159
4.4.8.	Defect response signals - solid conductors . . . . .	164
4.4.9.	Résumé . . . . .	171
4.5.	Summary . . . . .	171
5	POSTPROCESSING - 3D VISUALIZATION OF FIELDS AND OBJECTS	173
5.1.	Introduction . . . . .	173
5.2.	Description of vv program . . . . .	173
5.3.	Visualization of 3D objects . . . . .	177
5.4.	Visualization of scalar and vector fields . . . . .	183
